

Product Specification Data
DCM DRY ERASE
MAGIK-STIK™
REMOVABLE VINYL

Facestock: Phthalate-Free Flexible Vinyl with Topcoat

DCM Dry Erase is our classic Magik-Stik product with a specially applied topcoat that transforms it into an easy-to-clean dry erase board. Virtually any surface can be transformed into one that accepts dry erase markers.

DCM Dry Erase is available in 3.5 mil white vinyl and 5.0 mil white vinyl.

Adhesive: Proprietary Removable/Repositionable System

DCM Dry Erase vinyl uses the same proprietary, water-based, microsphere adhesive formulation as our other Magik-Stik products. Magik-Stik adhesive works great on a variety of surfaces such as painted drywall, glass, metal, sanded wood (w/o lacquer), and most any non-textured or non-porous wall.

The minimum application temperature for DCM Dry Erase is 40°F, with a service temperature range of 40°F to 120°F.

Liner:

DCM Dry Erase is available on a 92# double-sided, poly-coated liner.
